A line connects two points.

A line is longer than it is wide.

Lines can be short and lines can be long.

Lines can be straight and lines can be curved.

You can bend lines to make a shape.
You can join straight lines together to make a shape.
You can join curved lines together to make a shape.

There are many kinds of shapes.

Circles, squares, rectangles and triangles are geometric shapes.

We can use geometric shapes to draw many things.

Let's Make Shapes! • Level J

5

When a line goes all the way around, it makes a circle.
You can use a circle, three small circles and a curved line
to make a face.

6

On another piece of paper,
draw a circle.

Then make it a mouse with
eyes, ears and whiskers.
Use lines and more circles.

Let's Make Shapes! • Level J

7

If we cut a circle in half, we get two half circles.
You can use four half circles to draw a caterpillar.

8

On another piece of paper, draw a half circle.

Let's Make Shapes! • Level J

Then make it into a fish with eyes, a tail and fins.

9

When a line turns a corner three times, it makes a triangle. Triangles have three sides and three corners. You can use triangles to make a face on a pumpkin.

10

On another piece of paper,
draw a triangle.

Then make it into a tree
with leaves and a trunk.

When a line turns a corner four times, it makes a square.
A square has four sides and four corners.
Each side is the same length.
You can use squares and half circles to make a truck.

On another
piece of paper,
draw a square.

Then make it into a dog by adding
ears, a tail and legs.
Use curved lines and straight lines.

A rectangle has four sides, just like a square.
Two sides are the same length.
The other two sides are another length.
You can use rectangles, circles, squares and lines
to draw a bus.

On another piece of paper, draw a rectangle.

Then make it a house with a roof, two windows and a door.

Use a triangle and three rectangles.

Now, on another piece of paper, make a picture using all of the shapes: circles, squares, triangles and rectangles.
